The threat of Brain Attack!

Definitely when a relative suffers a stroke, it is a major emergency and all tambu around the patient will strive to get the ambulance to pick-up the patient. The Pacific International Hospital of Port Moresby has a 24/7 Emergency Room, and our doctors of the Emergency Room provided the information below so that the family of a stroke patient could tell if it is a stroke he or she is undergoing.

What is a stroke?

A stroke, also called a "brain attack", occurs when an area of the brain is damaged following interruption to its blood supply. This results in deterioration of the mental and physical functions controlled by that particular area.

What is the cause?

There are three main causes:

Thrombosis – a clot forming in the artery to the area

Embolus – a small clot from elsewhere blocking the artery

Haemorrhage -- bleeding into the brain (unlike the others, where the artery is blocked)

The risk factors for stroke are:

High blood pressure

High Cholesterol

Diabetes

Smoking

Heart Disease

What are the symptoms?

The symptoms depend on the area of the brain affected and the cause. A haemorrhage usually has a sudden onset and a less favourable outlook. Sometimes a stroke is mild and the effects pass off in a day or so.

Doing regular exercise can help prevent one from becoming a stroke patient as above pictures tell the story.

Symptoms include:

Unconsciousness

Confusion

Loss of power of speech

Loss of movement of the part of the body (e.g. on one side of the body)

Double or blurred vision

Difficulty understanding questions

Headache

Dizziness

Difficulty walking or using arms

Numbness or a weak feeling on one side of the body (face, arm or leg)

How common are strokes?

They are very common, espe-

cially in people over 65 years and more so in males. In Western countries they are the third most common cause of death and after heart attacks the second most common cause of sudden death. Those at special risk are those with high blood pressure, diabetes or high blood cholesterol and heavy smokers.

How can strokes be prevented?

The risk factors need to be checked, especially high blood pressure and cholesterol, which must be kept under control. Other things to do are to avoid smoking, avoid excessive

alcohol intake, meat a low-fat healthy diet, keep to an ideal weight and have regular exercise.

If you have been found to have hardening of the arteries to the brain, you may be advised to have tablets to prevent blood clots (thrombosis) forming. Aspirin can do this, and only a small dose is needed. Garlic tablets are reported to prevent clots, and special blood-thinning tablets called *anti-coagulants* (commonly warfarin) can be prescribed.

What is the treatment for stroke?

It is important to call an ambulance and get to a stroke unit as soon as possible. Follow the FAST rule:

F = facial weakness (ask the person to smile)

A = move arms (raise both arms)

S = speech (speak a simple sentence)

T = time – act quick if there is a problem with any or all of the above.

An injection within 3 hours may dissolve a blood clot.

Intense rehabilitation to get limbs and speech working again is important. Ideally physiotherapy should be commenced in the first 2 days.

Pacific International Hospital has already received a number of stroke cases this year at its new 3-Mile facility.

According to Dr. Ronnie Koli of PIH ER, there are at least 4 days each week that a new stroke patient is admitted to PIH ER.

PIH also has the laboratory facilities to check precisely your blood cholesterol and also diabetes. And of course, our emergency room is always on the ready.

SUFFERING FROM JOINT PAINS, HEADACHES OR BACK PAIN, BUT DON'T KNOW THE EXACT CAUSE? HAVE YOU BEEN ADVISED AN MRI SCAN BY YOUR DOCTOR?

NOW, YOU DON'T HAVE TO TRAVEL OVERSEAS!

CELEBRATING ONE YEAR OF THE COUNTRY'S ONLY MRI FACILITY!!

200 MRI scans done since inception in 2014.

MRI is a non-invasive diagnostic test that uses strong magnetic field and radio frequency waves to see inside your body.

What can it do for you?

• Find disease or abnormal conditions

- Find tumours
- Study brain and spinal cord imaging
- Study joint disorders, such as arthritis
- Detect problems in heart or blood vessels
